Continuing to lead the profession

The Royal Pharmaceutical Society (RPS) is confident about the contribution and impact that pharmacists have on the lives of millions of people in the community and in hospitals across Great Britain, through their expert knowledge of medicines and delivery of high quality patient-centred care. The role we are fulfilling ensures that pharmacists’ skills and talents are developed so that they can be the best they can be, and ensure their development of expertise and impact in healthcare is recognised, across all settings and, crucially, by the public.

As the RPS marked its 5th anniversary in 2015 all sectors of pharmacy continued to face significant challenges. There is pressure to drive up standards whilst resources remain constrained. The need for strong, progressive leadership, support and services from a forward thinking and dynamic professional body has never been greater. The RPS is committed to delivering on this for pharmacy.

In 2015 we continued our call across all three countries for the NHS to fully integrate pharmacists’ expertise into the multidisciplinary team, and ensure the value of this was recognised by commissioners, politicians and stakeholders. We campaigned across Great Britain for pharmacists to have full access to patients’ health records, for example, which will help integrate pharmacy into the NHS. The ability to represent members in England, Scotland and Wales, as well as across all areas of pharmacy, is a key strength that has paid dividends with increasing proof of our influence and leadership across Great Britain.

The RPS has seen significant developments in the last year, none more so than in our publishing division. In September Pharmaceutical Press launched the redesigned British National Formulary (BNF). This will better facilitate digital production for the future, improve user experience, and bring information into one place in the print format. These achievements are matched with a sound financial and resourcing strategy that has allowed the RPS to invest and plan for the future.

2015 was the year we said goodbye to Lambeth and relocated to our fantastic new headquarters at 66–68 East Smithfield. The building showcases the Society’s proud history and leading role within the pharmaceutical profession across England, Scotland and Wales. It is a facility for all members to enjoy with the very latest in modern meeting and conference facilities, and we look forward to welcoming those of you who are still to see the new building.

In this review we outline our major achievements in 2015, including the growing status of our Faculty and Foundation programmes. 2016 will see the RPS continue to lead the profession, recognise our members’ expertise, support and develop pharmacists as well as provide world leading medicines information. We look forward to working with the profession to improve patient care and the public’s health in the year ahead.

“Since our move into the new building, our permanent home is an excellent location to serve our members and enables the Royal Pharmaceutical Society to continue to represent and support the profession at the highest level.”

Campaigning for policy changes

The RPS led on the most important issues for members in 2015. The opinions expressed by members at LPF meetings and online were used to inform RPS Board policy decisions.

The Royal Pharmaceutical Society (RPS) is committed to robust and effective advocacy, which has enhanced the impact of our policy work. Sandra Gidley, RPS English Pharmacy Board Chair, gave evidence to the House of Commons Health Select Committee and All-Party Pharmacy Group in 2015.

Under the banner ‘Shaping Pharmacy for the Future’, the English Board led work to promote the potential for pharmacists to undertake more patient care roles. In March 2015, the English Board launched a campaign to increase numbers of pharmacists working alongside GPs in surgeries. Extensive work with the media, Westminster and Whitehall, and joint working with the Royal College of General Practitioners, played a major part in securing £31m of funding to facilitate pharmacists working in GP surgeries.

The English Board led a campaign for pharmacists to have access to the electronic patient record, engaging with key stakeholders. As a result, the Government announced the roll-out of a programme in England that gives pharmacists access to the summary care record, to be completed by March 2017. Work is ongoing to gain acceptance for pharmacists to have full read/write access to the electronic patient record across Great Britain.

Local practice forums (LPFs) in England have been extremely supportive of the RPS ‘Shaping Pharmacy for the Future’ campaigns. Twelve LPFs hosted an event on one of the 2015 campaigns, encouraging members to take action at a local level.

The Scottish Board, working in partnership with Community Pharmacy Scotland and the NHI-S directors of pharmacy, produced a joint pharmacy submission into the Scottish Government’s ‘Review of Out of Hours Provision in Primary Care’. This, and the RPS policy on assisted dying, resulted in RPS representatives speaking to the Health and Sport Committee in Holyrood.

As part of comprehensive policy work throughout 2015 in Scotland, a highlight was the production of a policy paper on ‘Seven Days Working’, which was submitted as written evidence to the Scottish Parliament Health and Sport Committee’s evidence taking session on seven day working.

The Scottish Board also developed a manifesto for the 2016 Scottish parliamentary elections, which was well received by current and prospective MSPs.

The board in Wales followed up on the RPS policy on assisted dying, resulting in RPS representations speaking to the Health and Social Care Committee in Holyrood.

The Welsh Board also began engagement with the Older People’s Commissioner for Wales on co-working to improve quality and safety of medicines use in care homes.

Pharmacy Research UK (PRUK) engaged in research policy, working to improve the national landscape and infrastructure for pharmacy research and education. The charity responded to and created three consultations and briefings since the initiation of their research policy programme in October 2015.

Expert advisory groups for hospital pharmacy and antimicrobials were established in 2015, and a pre-registration advisory group was also set up.

The Pharmaceutical Science Expert Advisory Panel continued their work to deliver on the recommendations of the ‘New Medicines, Better Medicines, Better Use of Medicines Guide’ on patient safety, new technologies, the evidence base for pharmacy and antibiotics. Meanwhile, we gave lectures and participated in public debates on important issues in pharmaceutical science, including antimicrobial resistance, payment for medicines and personalised medicine.

2014 ‘Your Care Your Medicines’ vision for pharmacy in Wales, and engaged with the Prudent Prescribing Implementation Group in order to produce a joint all-Wales policy on Models of Care for Pharmacy within Primary Care Clusters.

The Welsh Board also began engagement with the Older People’s Commissioner for Wales on co-working to improve quality and safety of medicines use in care homes.

Pharmacy Research UK (PRUK) engaged in research policy, working to improve the national landscape and infrastructure for pharmacy research and education. The charity responded to and created three consultations and briefings since the initiation of their research policy programme in October 2015.

Expert advisory groups for hospital pharmacy and antimicrobials were established in 2015, and a pre-registration advisory group was also set up.

The Pharmaceutical Science Expert Advisory Panel continued their work to deliver on the recommendations of the ‘New Medicines, Better Medicines, Better Use of Medicines Guide’ on patient safety, new technologies, the evidence base for pharmacy and antibiotics. Meanwhile, we gave lectures and participated in public debates on important issues in pharmaceutical science, including antimicrobial resistance, payment for medicines and personalised medicine.
Ensuring the value of pharmacists is understood

Throughout 2015, the RPS continued to increase the public’s recognition of pharmacists’ expertise, as well as stakeholders, politicians and other healthcare professionals.

The RPS continued to raise the profile of pharmacy with both patients and the public by engaging with patient representative organisations. This led to the production of ‘The Role of Pharmacy in Delivering Person-Centred Care’, for example. In Scotland, the team hosted and delivered engagement seminars for representatives from various patient groups, including Alzheimer Scotland, Parkinson’s UK, Chest, Heart and Stroke Scotland, Asthma UK and Carers’ Trust. These patient perspectives informed our work and helped shape the RPS Scotland 2016 manifesto.

Continuing its recognition of the expertise of pharmacists, the RPS Faculty welcomed 135 new members and Fellows in 2015. Faculty submission was opened up to members with between two and ten years post-registration experience and a quarter of the submissions were received from this group. In 2016, we will continue to develop the Faculty submission portal and resources to improve the process and introduce monthly submission points to widen access to assessments and reduce the time it takes to receive awards.

Through our Foundation Accreditation programme, we recognised three higher education institutions and two community pharmacy employers for their high quality Foundation Training programmes that support the professional development of pharmacists in their first 1,000 days of practice. There are now almost 1,000 early career pharmacists completing Foundation Training at an RPS accredited pharmacy school or training provider.

The RPS aims to harness the expertise of pharmacy to support and develop the pharmacy evidence base. We were able to share and showcase pharmacy innovation with the RPS ‘Map of Evidence’, which enables the collation of existing evidence and ongoing initiatives that can ultimately inform policy and practice relating to pharmacy. The ‘Map of Evidence’ holds 361 pieces of evidence, with content comprising research, audit, service evaluation, service development and case studies, and it was accessed more than 4,700 times in 2015.

The flagship Research Ready Community Pharmacy Programme recognised the expertise of individuals by certifying pharmacies to engage in research and evaluation activity. In 2015, 178 pharmacies were certified as Research Ready across the UK.

Through the RPS Awards and Pharmaceutical Care Awards, we continued to recognise and reward excellence and innovative work in pharmacy. In 2015, the RPS Leadership in Pharmacy Award was presented to Philip Newland-Jones, and the Lifetime Achievement Award was given to Raymond Fitzpatrick for his outstanding contribution to the profession during his career.

“RPS featured in national and regional media once a day on average in 2015”

In 2015, the RPS had success with several initiatives, including the ‘I Love My Pharmacist’ competition that ran for a second year. Nearly 4,000 members of the public voted for their favourite pharmacist, with widespread recognition of the profession reaching almost 4 million people through media channels. ‘I Love My Pharmacist 2016’ has now launched and we hope for even more success in the year ahead.

In 2015, the RPS featured in national and regional media once a day on average, with more than 400 pieces of media coverage throughout the year. We spoke on a wide range of topics, including pharmacists in GP surgeries, antimicrobial resistance, dinitrophenol (DNP) and the dangers of buying drugs online, and calls for clearer labelling on sunscreen. Our spokespeople appeared on a range of programmes, including BBC Breakfast, BBC Radio 4 Today, Sky News, Channel 4 News, Channel 5 News, STV News and BBC Radio Wales. We also featured in print media, such as The Daily Telegraph, The Times, The Guardian, Daily Mail, The Scotsman, and the Western Mail. None of this would have been possible without the support of RPS members, who give up their time and use their expertise to advise the public on a range of subjects.

Over 400 pieces of media coverage throughout the year.

Helping members become the best they can be

“Support and development resources were viewed more than 30,000 times in 2015”

During 2015, the RPS Professional Support service provided support to members on all aspects of practice and professional development, publishing 120 online resources and issuing around 80 online and email support alerts.

We also supported students at university fresher and career events, Events were held across all three countries to support members with their RPS Faculty journey and the RPS Foundation Programme.

Around 120 delegates attended our first RPS Scottish National Seminar ‘Pharmacy working together to advance quality’, focusing on four main themes: supporting professional development; quality in practice; promoting effective joint working; and embedding research into practice.

Throughout 2015 we continued to support members to develop confidence and recognise competence in delivering research. This has included a dedicated ‘Getting Research Ready’ workshop at the Health Services Research and Pharmacy Practice Conference, LFPP visits, and development of an ‘Introduction to Research Ready’ webinar in collaboration with the English Clinical Research Network. We provided dedicated advice, guidance and coaching on research engagement and activity. We continue to coach members in research capacity building grants and fellowship support through both RPS research advisory role and PRUK research funding.

In 2015, The Pharmaceutical Journal received an award of excellence for its overall redesign.

“Monitoring the way members use The Pharmaceutical Journal has helped us decide the next steps”.

In 2015 launches

32,500 members and subscribers received The Pharmaceutical Journal in December 2015.
The Royal Pharmaceutical Society Annual Review 2015

Enabling members to advance in their careers

The RPS aims to ensure members are supported during every stage of their career, from day one as a student to career end, across all sectors and areas of expert practice.

Since 2010, the RPS has changed the way it delivers career development support. In 2010, there was no membership category for student or pre-registration pharmacists. In 2015, almost 95% of students and more than 85% of pre-registration pharmacists were members.

We spent time developing undergraduate students through our Student Training Programme in 2015, providing third-year students with peer-to-peer recommendation to use RPS resources in their studies. In Scotland, we engaged with all NHS Education for Scotland (NES) pre-registration pharmacists by providing course input throughout the year, including integration of the RPS pre-registration mock exam into the NES mock exam day. We supported the development of 2,500 pre-registration pharmacists across Great Britain by attending 50 study days, and with a new suite of resources and tools, including preparation for the new style registration assessment and day one practice.

The ‘RPS Tutor Guidance’ was launched in October for members tutoring pharmacists at any stage of their career, but particularly pre-registration and Foundation tutors. The guidance aims to help new tutors, and those planning to become a tutor, obtain an overview of the role and identify or develop the relevant knowledge, skills, experiences and behaviours to perform the role effectively. We also developed a suite of resources to support mentors and mentees across the profession.

Our post-registration career development programmes, the Foundation Programme and the Faculty, continue to grow. We now have more than 3,000 practitioners building their Faculty portfolios, and over 400 credentialed Faculty members and Fellows. We worked to review the purpose of the RPS Faculty to align it with the RPS Foundation programme, ensuring it was clear that the RPS strives to support career progression from day one in practice to career end, through support for professional development and recognition of achievement. During 2015 we expanded our range of Foundation Programme resources, including seven quick reference guides, five instructional videos and accompanying podcasts, to support both Foundation pharmacists and tutors.

In Wales, we worked with chief pharmacists and tutors to establish the place of RPS career development programmes throughout the country. The Gwm Taf University Health Board released a position statement declaring that all pharmacists should be members of their professional body and should engage with the RPS Faculty and achieve membership at an appropriate level. In England, 18 LPFs supported local members on their Faculty journey by hosting events to help them build their portfolio. Events were also held in Scotland and Wales.

A year-long joint RPS/NES Education Project was completed in 2015 and a subsequent report outlined recommendations for the Scottish Government and key stakeholders. This project reviewed postgraduate vocational training in Scotland and the RPS Foundation Programme and Faculty, with a view to achieving better alignment to enable and maximise the delivery of the aspirations and ambitions of the Scottish Government’s ‘Prescription for Excellence – Vision and Action Plan’.

Our work across scientific disciplines included an event for Qualified Persons where more than 150 individuals were supported in their development at the 14th Joint QP Symposium; QP responsibilities and the pharmaceutical supply chain.

The RPS encourages pharmacies to become research active and to support the professional development of pharmacists to undertake and deliver research. In 2015, PRUK awarded £150k to research projects, including continuing collaborations with the Daphne Jackson Trust and the UK Clinical Pharmacy Association (UKCPA), and sponsored a number of events that aimed to build research capacity and promote pharmacy research evidence. The charity also ran the Health Service Research & Pharmacy Practice Conference, the only national dedicated pharmacy health service research conference.

Our Members Tim Banner

As a Consultant Pharmacist in the Cardiff and Vale area Tim Banner has worked closely with the RPS to lead on pharmacy involvement in community healthcare. With this specialist interest in the area of community healthcare he was drawn to the RPS to help influence improvements in medicines management in care homes.

Pre-reg members attending our mock assessment and revision courses
Sharing ideas and information with colleagues

Through local and national events, online groups, and social media, the RPS ensures that members can network with their peers to further their professional development, and optimise patient care.

RPS events provide a place for debate on important issues. In 2015, interest in our events grew, with a 25% increase in attendees nationally. There were 11,000 bookings for events, including the Faculty reception, Fellows dinner and the RPS 5th birthday celebrations. The highlight of the year was our Annual Conference, which had around 400 delegates and trended twice on Twitter. Keynote speakers included Dr Pat Oakley from King’s College London, Duncan Selbie, the Chief Executive of Public Health England, and Roy Lilley, NHS commentator and blogger.

Our 48 LPFs are spread throughout Great Britain to ensure that members have access to networking opportunities in their area. In 2015, LPFs in England held 200 events and conferences with more than 4,700 pharmacists attending.

The RPS also reached out to pharmacists at other conferences, workshops and seminars throughout the year. RPS representatives attended the Pharmacy Show, PharmSci and College of Mental Health Pharmacy conferences, as well as pre-registration and student events.

RPS Scotland held some successful events in 2015, including ‘Prescription for Excellence’ – it’s happening now!, a joint conference with NHS Education for Scotland, seeking to highlight the developments of the ‘Prescription for Excellence’ plans; this event gained the approval of the Scottish Government with speakers including Alpana Mair, Deputy Chief Pharmaceutical Officer; and Evelyn McPhail, Director of Pharmacy at Fife NHS Board. More than 200 delegates attended.

In Wales, the 5th Annual Medicines Safety Conference, co-hosted with 1000 Lives Improvement, welcomed 150 delegates from a range of sectors, industries and specialties. Speakers included Vaughan Gething, Welsh Government Deputy Minister for Health, and Dr Bruce Warner, Deputy Chief Pharmaceutical Officer at NHS England.

The RPS has an active presence on social media. The RPS Facebook page ‘likes’ grew by 82% to over 18,000, with more than 500,000 visitors in 2015. There were over 4 million page views with more than 500,000 visitors from 211 countries.

Through events, social media and virtual networks we continue to connect our members to ensure that pharmacists are able to pool knowledge and expertise. By growing our level of engagement we aim to expand the level of support we are able to offer pharmacists, and maximise the impact that members have on patients.

2,500 members and the recently qualified pharmacist group has almost 2,000 members.

Our 142 online groups and LPF virtual networks had around 5,000 posts on a variety of topics in 2015. As well as sector specific forums, other online communities for pharmacists include the Research and Evaluation Network, Humanitarian Aid and Response Network, and the Retired Pharmacists Group. The Women in Pharmacy Group launched in 2015 and has almost 300 members.

The RPS website is an essential resource for pharmacists and this is reflected in usage statistics. In 2015 there were over 4 million page views with more than 500,000 visitors from 211 countries.

Through events, social media and virtual networks we continue to connect our members to ensure that pharmacists are able to pool knowledge and expertise. By growing our level of engagement we aim to expand the level of support we are able to offer pharmacists, and maximise the impact that members have on patients.
Providing medicines information on various platforms

“A redesign of the BNF has enabled clearer, faster and easier access to the information required”

The RPS is committed to providing information on a range of subjects in a variety of formats for healthcare professionals and students, from reference works and professional journals to member specific reports.

During 2015, Pharmaceutical Press – the publishing arm of the RPS – continued to provide specialist, up-to-date medicines information. This included new editions in print, online and e-Book formats of the Orange Guide (Rules and Guidance for Pharmaceutical Manufacturers and Distributors); and the Green Guide (Rules and Guidance for Pharmaceutical Distributors); Handbook of Drug Administration via Enteral Feeding Tubes; Stockley’s Drug Interactions Pocket Companion; and Clinical Pharmacy Pocket Companion.

To help students through their pharmacy and pre-registration exams, we published new editions of our learning and revision guides – among them were ONSTrack, our digital revision aid for undergraduates and pre-registration students; the fourth in our successful Registration Exam Questions series; and a new edition of the popular Physicochemical Principles of Pharmacy.

In 2015, we introduced a new content management system, enabling the editorial team to work more efficiently. Our next task was a major project to deliver a new BNF user experience. The BNF on MedicinesComplete and all three BNF print products were redesigned and reformatted, giving clearer, faster and easier access to the information required. This not only paves the way for future digital developments to be implemented, but also provides an improved set of products for use in today’s modern healthcare environment. We continue to provide up-to-date, independent prescribing information with two print editions of the BNF per year, in addition to digital access via MedicinesComplete, the NICE BNF app; and the NHS Evidence website. In 2015, we began work on our own BNF app, which will be launched later in 2016.

In 2015 we developed a variety of new resources for members, including guidance on “specials” and unlicensed medicines, guidance on biomimics, repeat medicines, collection and delivery services and sodium valproate, and a new Near Miss Error Log for pharmacy teams.

We often work with other membership bodies to produce joint reports on medicines information, and 2015 was no exception. We successfully delivered a joint Royal College of Nursing and RPS report on helping patients make the most of their medicines.

Pharmaceutical Press continues to support pharmacists to improve healthcare for the benefit of patients and the public. To this end, PRUK funded three research projects related to improving the quality of medicines information, led by the University of Manchester, the University of Bradford and the University of East Anglia. A total of 11 projects on the current PRUK portfolio directly seek to build the evidence base around medicines information.

Throughout 2015, we developed the content and applied new quality standards to The Pharmaceutical Journal. Features on interesting topics within the scope of pharmacy and science are becoming points of reference in the industry for the subjects they cover. For example, we have had encouraging unsolicited feedback from Adrian Hutter, Vice President of the Exercise is Medicine initiative at the American College of Sports Medicine, on our feature ‘Tracking down the optimum dose of exercise’. Another feature, ‘A visual guide to the Ebola virus epidemic’, won the Data Journalism Award at the Medical Journalists’ Association. Our opinion pieces are contributing to ongoing discussions and sparking new debates about healthcare and science, while our career articles have attracted thousands of readers and encourage pharmacists to look beyond predefined boundaries to further their careers.

The Pharmaceutical Journal team also worked towards relaunching Clinical Pharmacist as a peer-reviewed journal at the beginning of January 2016.

Lastly, we recognise the increasing demand for access to online medicines information. We have continued to enhance our flagship digital product, MedicinesComplete, with the addition of new content and a new tool designed to help users answer drug interaction queries.
Income and expenditure

“This has been a year of moving towards financial balance after an intense period of sustained investment. That journey continues into 2016, underpinned by a sound financial and resourcing strategy that will allow us to invest and plan for the future”

During 2015 the RPS developed the role of pharmacists in patient care through recognition of their skills as well as producing guidance, support and medicines information for the profession.

RPS members services offered by the RPS Foundation programme and the RPS Faculty.

The Pharmaceutical Journal continued to evolve in 2015, along with Clinical Pharmacist, which was relaunched in January 2016 and is now available to all members in new style monthly editions.

Our most important publications, the BNF and BNF for Children, have been redesigned from the ground up in order to better facilitate digital usage, and bringing the drug information into one place in the print format, we have provided an improved user experience.

Pharmaceutical Press has developed capacity for continuous improvement of its processes to create better products at lower cost and is developing a wider customer base internationally through new sales partnerships.

The relocation of the RPS Headquarters to a modern facility, was funded from the sale of our ageing and underutilized property at Lambeth, and the move brings a substantial saving of £0.4m in 2015 and a net increase in our cash reserves of £2.8m. Together with asset revaluations, this has improved the strength of our balance sheet significantly, from net assets of £10.9m to £26.2m at the end of 2015.

The RPS placed £10m of its reserves in a Diversified Growth Fund, investing in a variety of asset classes, designed to achieve long-term capital growth for the Society, a foundation for long term sustainability and growth of the Society in its efforts to serve members and customers.

Year on year revenues generated from digital formats of publications have increased by 12%, demonstrating the desirability of more flexible online medicines information by health professionals, alongside our printed resources. RPS Members and Fellows grew by 5.4%, increasing both in number and diversity, reflecting the success of the career-stage focus on member services offered by the RPS Foundation programme and the RPS Faculty.

Operating surplus/(deficit) (1,105) (1,467)

Net investment (loss)/gain 634 –

Surplus on disposal of land and buildings 1,172 –
