

Chronic obstructive pulmonary disease in over 16s: diagnosis and management (update) (Dec 2018)

NICE National Institute for
Health and Care Excellence

Consultation on draft guideline – deadline for comments 5pm on 6 August 2018 email: COPDupdate@nice.org.uk

Please read the checklist for submitting comments at the end of this form. We cannot accept forms that are not filled in correctly.

We would like to hear your views on the draft recommendations presented in the guideline, and any comments you may have on the rationale and impact sections in the guideline and the evidence presented in the evidence reviews documents. We would also welcome views on the Equality Impact Assessment.

We would like to hear your views on these questions:

1. Which areas will have the biggest impact on practice and be challenging to implement? Please say for whom and why.
2. Would implementation of any of the draft recommendations have significant cost implications?
3. What would help users overcome any challenges? (For example, existing practical resources or national initiatives, or examples of good practice.)
4. The guideline recommends that long term oxygen therapy should not be offered to people who continue to smoke despite being offered smoking cessation advice and treatment, and referral to a specialist stop smoking service. This is because the risks to the individual and people they live with outweigh the potential benefits of long-term oxygen therapy. Do you believe that this recommendation is appropriate? We would welcome your comments on this issue.
5. We propose to stand down recommendations 1.3.22 – 1.3.25 on antibiotics for the management of exacerbations. Instead the guideline will cross refer to the recommendations in the guideline on [antimicrobial prescribing for acute exacerbations of COPD](#). Do you agree with this proposal?

See section 3.9 of [Developing NICE guidance: how to get involved](#) for suggestions of general points to think about when commenting.

General Comments				<p>The Royal Pharmaceutical Society is the professional body for pharmacists and pharmacy in Great Britain. As professionals in pharmaceutical care, pharmacists are well equipped to offer advice on management of chronic diseases. With an increasing number of pharmacist independent prescribers and those specialising in specific disease states such as chronic obstructive pulmonary disease (COPD), pharmacists are often directly involved in diagnosis and supporting patients to monitor their condition.</p>
1	1.2.5	14	14	<p>Community Pharmacists are ideally placed as the first point of contact for patients, to ask patients if they smoke and offer advice to stop smoking. They do this as part of their consultation when handing out prescriptions and when undertaking medication reviews, especially patients whose medicines for health conditions are made worse by smoking or who have a smoking related illness. Pharmacist and pharmacy staff can identify patients requesting OTC treatments or advice for NRT.</p>
2	1.2.93	27	29	<p>With an increasing role of specialist and consultant pharmacists, pharmacists play a vital role on the management of chronic conditions such as COPD. It is important to remember that pharmacist are experts in medicines and therefore are not only able to support patients in managing COPD, but discussing inhaler techniques and devices that better support patient's condition. We would recommend alongside nurse specialist having a pharmacist specialist in a multidisciplinary team.</p>
3	1.2.99	30	23	<p>More pharmacies have become healthy living pharmacies and taken a prominent role in providing patients with diet and lifestyle advice. Healthy Living Pharmacies have health champions who can promote wellbeing and health improvement.</p>
