ABC Pharmacy

People:

Raise awareness among all healthcare staff and inform patients to avoid pouring any pharmaceuticals or chemicals down sinks, toilets or drains. Enforce messaging of returning all unused or unwanted medications to local pharmacies for disposal.	100%
Routinely ask patients to check their medications in pharmacy bags before leaving the pharmacy to prevent return of incorrect or unwanted items.	100%
Pharmacy settings have displayed environmental sustainability messaging (e.g., RPS Greener Pharmacy accreditation certificate, posters or leaflets) visible to patients and wider staff members to raise awareness.	100%

Clinical Practice - Level 2

Pharmacy staff are able to teach patients how to swallow solid drug formulations.

INFORMATION

SUBMIT EVIDENCE

CO-BENEFITS

Champion the delivery of the [KidzMed programme](#) (Link to external site).

Solid drug formulations have longer shelf lives (reducing liquid medication waste), usually do not require refrigeration (larger CO2e are associated with cold-chain medicines), easier to transport and are more readily stocked at pharmacies (reducing patient travel when attempting to source liquid medication from multiple pharmacies).

Prescribers should also consult evidence-based literature on the [Special Pharmacy Service website](#), or [the NEWT guidelines](#), for options to crush or dissolve tablets and prescribe alternative formulations (e.g., dissolvable tablets).
